Theory of Computation

DFA

Lecture No.- 07

By- Venkat sir

Recap of Previous Lecture

Topic

~~minimization of DFA~~

Topic

~~DFA for binary numbers.~~

length of the string

Topics to be Covered

Topic

Finite Automaton & Regular Languages.

Topic

Pushdown Automata & Context free Languages.

Topic

Turing Machine & Recursive Enumerable Languages.

Topic

Undecidability.

Topic : DFA

$$\Sigma = \{a, b\}$$

Construct the minimal DFA that accept all string a's and b's where

1. Length of string exactly 4. $\rightarrow 6$
2. Number of a's ~~length~~ of string atleast 4. $\rightarrow 5$
3. Length of string atmost 4. $\rightarrow 6$
4. Length of string divisible by 4. $\rightarrow 4$
5. Number of a's exactly 5. $\rightarrow 7$
6. Number of b's exactly 2. $\rightarrow 4$
7. Number of a's divisible by 3. $\rightarrow 3$
8. Number of b's not divisible by 4. $\rightarrow 4$
9. Length of the string even.

Topic : DFA

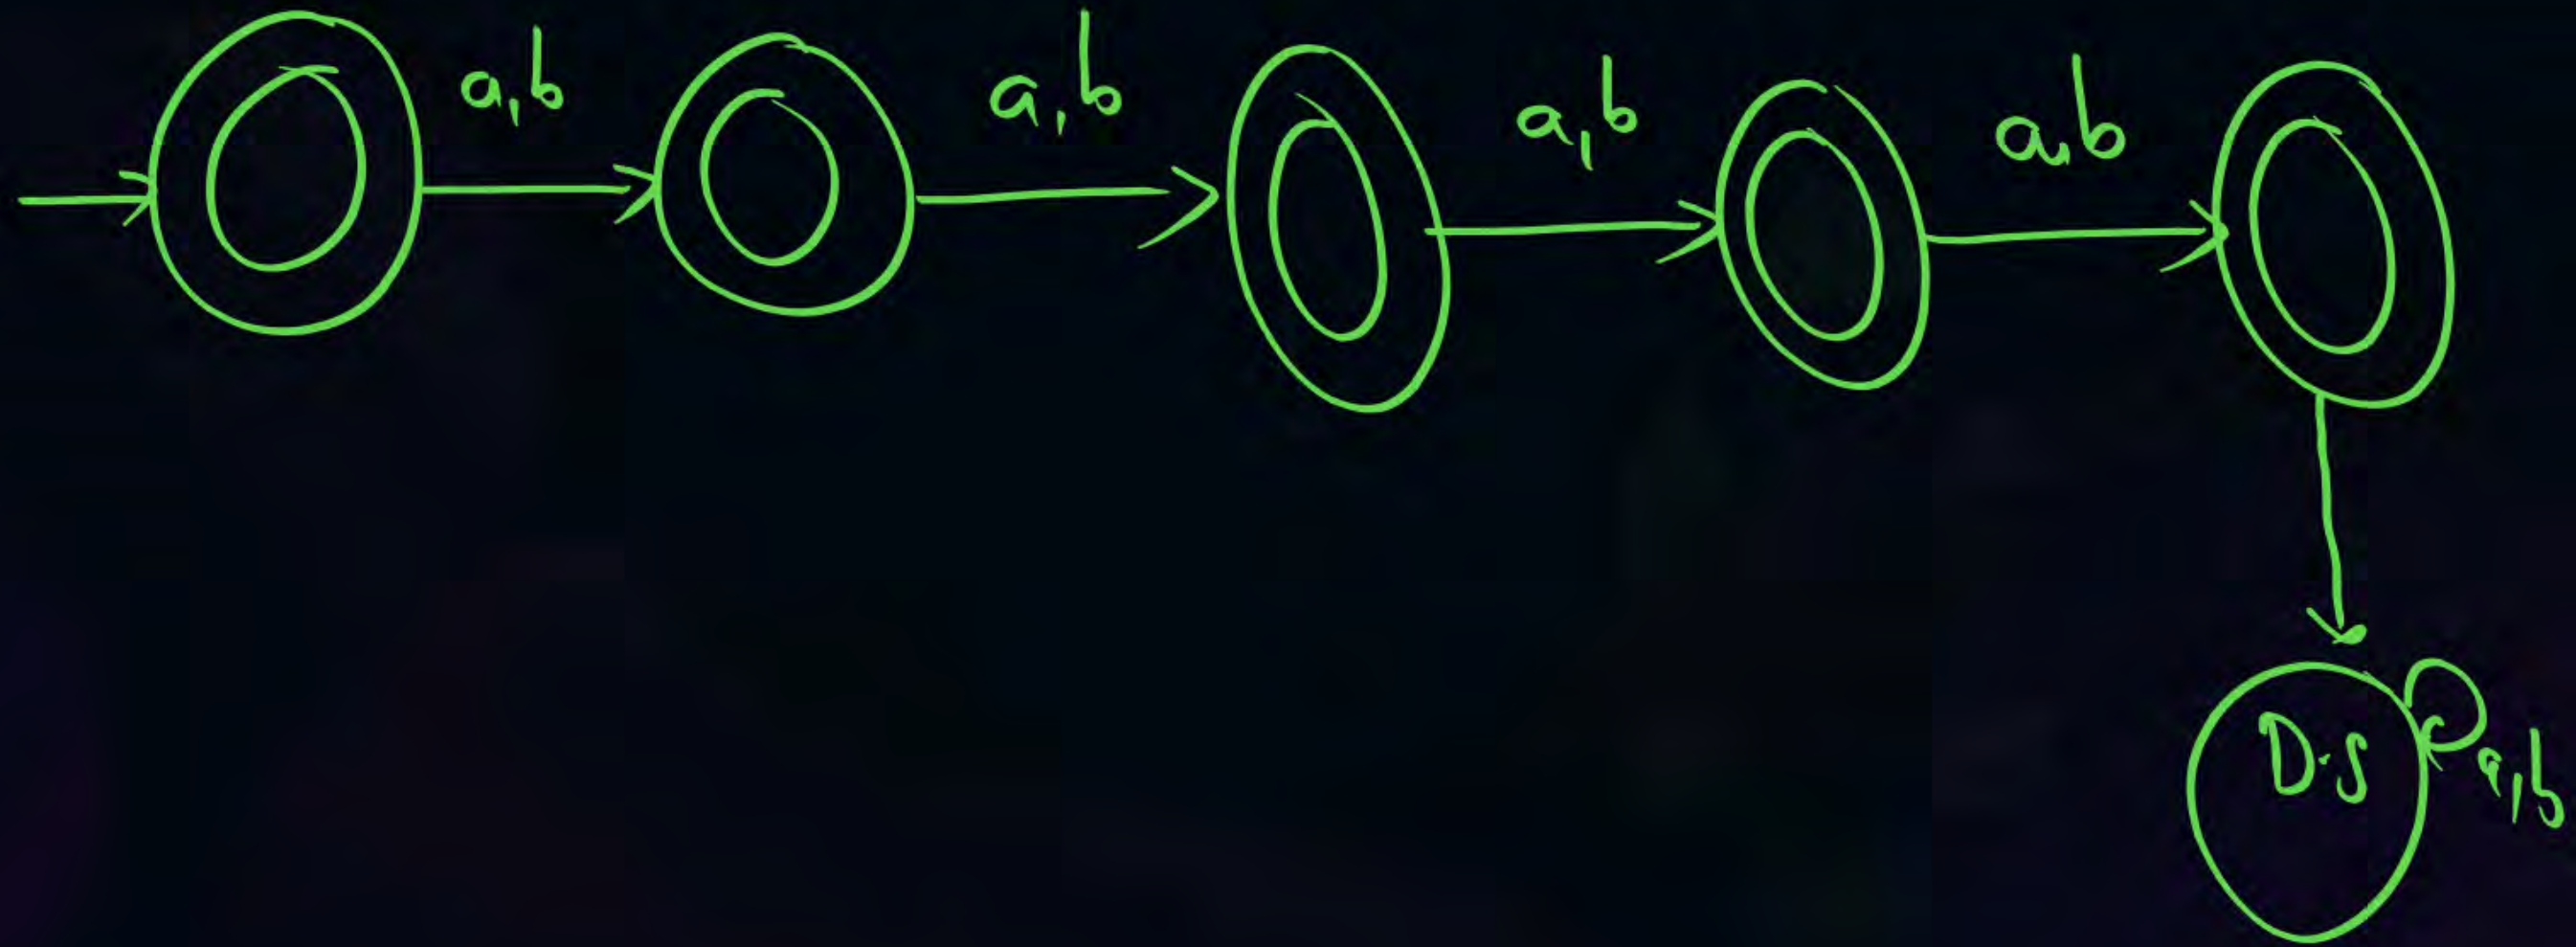

#Q. Length of string atleast 4.

Topic : DFA

$\{0, 1, 2, 3, 4\}$

#Q. Length of string atmost $\textcircled{4} \rightarrow 6$

Topic : DFA

#Q. Length of string ^{not} divisible by 4.

$\{ \underline{0}, \underline{4}, \underline{8}, \underline{12}, \underline{16} \dots \}$

even

4 → 4

5 → 5

⋮

n → n

Topic : DFA

NOTE:

- Minimal DFA that accept exactly N length string requires $(N + 2)$ states includes dead state.
- Minimal DFA that accept atleast N length string requires $(N + 1)$ states.
- Minimal DFA that accept atmost N length string requires $(N + 2)$ states includes dead states.
- The minimal DFA that accept length of the string divisible by N then requires N states.

Topic : DFA

$$\Sigma = \{a, b\}$$

Construct a minimal DFA that accept all string a's and b's. where number of a's divisible by 2 and number of b's divisible by 3.

DFA minimal states

① $\#a's \text{ even} \xrightarrow{2} (\text{and}) \xrightarrow{*} \#b's \text{ odd} \xrightarrow{2} 4$ ✓

② $\#a's \text{ odd} \xrightarrow{2} (\text{and}) \#b's \text{ odd} \xrightarrow{2} 4$

③ $\#a's \text{ even} \xrightarrow{2} (\text{or}) \xrightarrow{*} \#b's \text{ odd} \xrightarrow{2} 4$

$\Sigma = \{0,1\}$

④ $\#0's \text{ exactly } 4 \text{ and } \#1's \text{ atleast } 2 \rightarrow$

$5 * 3 = 15 + 1 = 16$ ✓

(Q) How many final states are in DFA for the given Lang

no. of a's odd (or) no. of b's even

(1) 1

(b) 2

(c) 3

(d) 4

$$\Sigma = \{a, b\}$$

$$\text{LCM}(4, 6) = 12 \checkmark$$

(Q) How many states in min DFA that accepts
length of the string div by 4 and div by 6.

(Q) no. of SS div by 4 (and) no. of SS div by 6
 $4 * 6 = \underline{24}$

(a) 24

~~(b) 12~~

(c) 10

(d) 6

2 * 4 \rightarrow { min DFA }

(1) # a's div by 2 (or) # b's div by 4 $\Rightarrow 8$ ✓

(2) length of the string div by 2 (or) div by 4 $\Rightarrow 2$ ✓

$\{0, 2, 4, 6, 8, \dots\} \cup \{0, 4, 8, 12, 16, \dots\}$ $\xrightarrow{G(D(2,4)) \Rightarrow}$

$\{0, 2, 4, 6, 8, \dots\}$ \rightarrow even $\rightarrow 2$ ✓

$\Sigma = 90$

Language

How many number of state are there ~~with~~ minimum DFA for the following ~~state~~.

- a) Number of a's divisible by 2 (and) number of b's not divisible by 3 $\rightarrow 6$ ✓
- b) Number of a's divisible by 2 (and) number of b's at least 3. $2 * 4 \rightarrow 8$
- c) Number of a's at least 2 and number of b's at least 3 $\rightarrow 3 * 4 \rightarrow 12$
- d) Number of a's exactly 2 and number b's at least 2. $\rightarrow 3 * 3 \rightarrow 9 + 1 \rightarrow 10$
- e) Number of b's at most 3 and number b's exactly 3. \rightarrow
- f) Number of a's not divisible by 2 or number of b's exactly 3. $\rightarrow 4 * 2 = 8 + 1 = 9$
- $\rightarrow 4 * 4 = 16 + 1 = 17$ ✓

a's exactly 2 (and) b's at least 2

LCM(2,4) → 4 ✓
length of the string div by 2 (and) 4 → 4 ✓

" " " 2 (or) 4 → 2 ✓
GCD(2,4)

$$\underline{2} \text{ and } \underline{4} \rightarrow \underline{\text{LCM}}$$

$$\underline{2} \text{ and } \underline{4} \rightarrow \underline{\text{GCD}}$$

length of the String div by (3) and (4) \rightarrow MUL

" " " " (4) and (6) \rightarrow LCM

$$(\text{and}), (\text{or}) \xrightarrow{\text{MUL}} \text{GCD}(3, 4) = 1 \rightarrow \text{multiplication}$$

$$(\text{and}), (\text{or}) \xrightarrow{\text{LCM}} 1 \neq \text{GCD}(4, 6) = 2 \} \underline{\text{LCM}(4, 6)}$$

Topic : DFA

NOTE:

Number of States of DFA on length conditions

- (i) ✓ Then in the given condition on length if one number divide other number then number of states of minimal DFA for "and" automata is LCM of given condition.
- (ii) ✓ Number of states of minimal DFA for "OR" automata is GCD of given condition.
- (iii) In the given length condition one number not divide other number then
→ If GCD of given condition is 1 then number of states of 'and' automata OR automata is multiplication of given condition.

$$4 \times 6$$

$$3 \times 6$$

$$3 \times 4$$

$$4 \times 8$$

$$2, 4$$

$$\begin{array}{r} 2 \overline{) 4} \\ \underline{4} \\ 0 \end{array}$$

min

Topic : DFA

- (iv) The given condition on length one number not divides other and GCD of given condition is not equal to 1 then number of states of (and) automata, number of states of 'OR' automata is LCM of given condition.

Find the number of stage of minimal DFA for the following matrix.

① (Length of the string divisible by 3 or divisible by 6)

$$\text{GCD}(3, 6) = 3 \text{ states}$$

② Length of the string div by 4 and di by 6

~~(v)~~ $\text{LCM}(4, 6) = 12$

~~(vi)~~ ③ Number of a's divisible by 4 AND number of b's divisible by 6.

$$4 \times 6 = 24$$

Topic : DFA

Find the number of stage of minimal DFA for the following matrix.

Q

Length of the string divisible by 3 or divisible by 6

$$\text{GCD}(3, 6) = 3$$

Length of the string di is by 4 and di by 6

$$\text{LCM}(4, 6) = 12$$

Number of a's divisible by 4 AND number of b's divisible by 6.

$$4 \times 6 = 24$$

Topic : DFA

1. Length of the string divisible by 2 and divisible by 6 $\rightarrow \underline{LCM(2,6)} \rightarrow 6 \checkmark$
2. Length of string divisible by 2 OR divisible by 4. $\rightarrow GCD(2,4) \rightarrow 2 \checkmark$
3. Length of string divisible by 3 ^{and} divisible by 4 $\rightarrow \{GCD(3,4)=1\} 3 * 4 \rightarrow 12$
4. Length of string divisible by 3 OR divisibly by 4 $\rightarrow GCD(3,4)=1\} 3 * 4 \rightarrow 12$
5. Length of string divisible by 6 OR ^{and} divisibly by 8 $\rightarrow GCD(6,8) \neq 1\} LCM(6,8) = 24 \checkmark$
6. Number of a's divisible by 6 and number of divisible by 8.
 $6 * 8 \rightarrow 48$

$$\underline{\Sigma = \{a, b\}}$$

How many states in min DFA that accepts
8th input symbol from from Right Hand Side is a.

THANK - YOU
